

METHOD AND SYSTEM FOR TRANSLATION MANAGEMENT
OF SOURCE LANGUAGE TEXT PHRASES

5 ABSTRACT OF THE DISCLOSURE

A computer system for implementing a method for managing translations of text phrases is disclosed. The system stores text phrases in a source language as individual entries within a database. The system also stores any imported text phrases in a target language as individual entries within the
10 database. For each text phrase in the source language stored within the database, the system is operable to communicate a notification of an exclusion of a corresponding text phrase in the target language within the database. Also for each stored text phrase stored in the source language within the database, the system is operable to communicate a notification of a modification of a text
15 phrase in the source language as stored within the database after a storage of a corresponding text phrase in the target language within the database.
